Foreword

Thank you very much for showing interest in our ram breeding operation. We hope that you will be able to join us on November 13th to help us celebrate what we consider to be a milestone- 100 years of continuous breeding and marketing of Romney sheep. 100 years surely shows the tenacity and versatility of the Romney breed and the evolution that has taken place to meet the changing challenges of farming and markets.

The sheep industry has faced many environmental challenges over time. Currently, facial eczema and internal parasites are extremely topical, as these conditions are tracking further south.

To this end, we have used some rams with FE tolerance and are involved with a group of Romney ram breeders testing progeny to identify sire families that show FE tolerance.

We do drench lambs, but have extended the time between drenches to a point where some lambs show the effects of extended drench periods. We cull these animals.

The data in this catalogue shows the NZMW (NZ Maternal Worth) made up of reproduction, growth, survival, adult size and wool. Beef and Lamb NZ genetics website shows that the average NZMW index is 1600. 2125 is the top 20% index and 2600 is an exceptional index (top 5%). The average NZMW index for the 30 rams catalogued here is 2631.

Performance is only part of our breeding goals. We have always endeavoured to maintain excellent structural soundness and carcass confirmation.

The Waidale flock of Ike Williams, Pleasant Point, has been dispersed and we are pleased to present his final selection of top rams.

Thank you very much for your attendance.

Richard, Margaret and family
