# INTRODUCTION

## BACKGROUND

Oripak Simmentals have been running for about 20 years. We have built the herd with a concentration of genetics from Hampton Downs Simmentals, but have also purchased a few cows from some other studs in Northland.

The farm just of Kaikohe, is 66 hectares, 50% flat and 50% rolling country side.

## STUD FOCUS

To produce polled simmental bulls and cows with a good temperament, easy calving and good growth. Bulls and heifers are fat scanned and beef class assessed by Austin Ultrasounds and we are working towards higher EMA and IMF as this is to help with the earlier finishing of animals. Positive fat covers make for easy keeping animals in harder times. All bulls and heifers have been BVD tested and inoculated.

TB status C10.

We have a closed farm policy.

Beef Class Structural Assessment has been done by Bill Austin, Austin Ultrasounds on the 2nd April 2019.

# CONDITIONS OF SALE

1. The sale will be conducted under the usual conditions of the New Zealand Stock & Station Agents Association.
2. A buyers number system will operate at the sale, therefore it will be necessary for all prospective purchasers to register prior to the sale commencement.
3. Each lot becomes property of the purchaser at the fall of the hammer.
4. The vendors guarantee that the purchase price (without interest, expenses, costs and damages) shall be refunded if a bull proves totally infertile or incapable of service. A veterinary certificate shall be produced by the purchaser when required. The guarantee does not cover incapacity or infertility due to injury, illness or neglect by the purchaser to keep the bull in reasonable health and condition or cover costs or loss of profit due to partial fertility.
5. Vendors guarantee the feet on sale bulls for two seasons.
6. All Lots are sold exclusive of GST.
7. The Vendor will action all Simmental transfer, please provide full details on sale day.
8. The New Zealand Stock & Station Agent's Association Conditions of Sale and, to the extent deemed relevant by CARRFIELDS, Carrfields Terms of Sale apply to this sale. When proceeds are credited or a purchase is debited to a Carrfields monthly credit account, then Carrfields Monthly Account Terms of Trade (as amended from time to time) apply to the extent deemed relevant by Carrfields. These terms can be inspected at the registration desk and on the wall in the auction room.

# PURCHASING REBATE

All intending purchases are required to register at the sale office prior to the sale.

Rebate 6% commission will be paid to non participating companies who introduce buyers to the sale and settle on their behalf.

# EBVS EXPLAINED

## ESTIMATED BREEDING VALUES (EBVS)

An EBV is the best estimate of an animal's genetic merit for that trait.

## ACCURACY

An accuracy is presented with every EBV and is an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or it's relatives. Accuracy below 75% should be considered low, however young bulls with performance data but no progeny will all have similarly low accuracies.

# EBVS EXPLAINED - continued

**Birth Weight EBV (kg)** is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

**200-day Growth EBV (kg)** is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to weaning.

**400-day Weight EBV (kg)** is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an **animal's genetic merit for yearling weight**.

**600-day Weight EBV (kg)** is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

**Eye Muscle Area EBV (sq cm)** is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

**Rib Fat and Rump Fat EBVs (mm)** are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

**Intramuscular Fat EBV (%)** is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

2019 SIMMENTAL GROUP BREEDPLAN EBVS AVERAGES			
Birth Wt (kg)	200 Day Wt (kg)	400 Day Wt (kg)	600 Day Wt (kg)
+0.7	+19	+34	+42
EMA (sq.cm)	Rib Fat (mm)	Rump Fat (mm)	IMF (%)
+2.6	+0.3	+0.2	+0.3

# BEEF CLASS EXPLAINED

It has been recognized within the beef cattle industry that there has been a substantial financial loss due to badly structured animals.

Whether it is the bulls being unable to serve, steers not being able to finish a long term feeding program or cows with badly structured udders not being able to rear their calves properly, it has been costing producer's income. All lots have been individually assess as per the Simmental NZ Beef-Class Structural Assessment Guide.

## HOW TO DO BEEF CLASS STRUCTURAL ASSESSMENTS

For docility - 1 is Ideal (docile), 3 is less ideal (restless) and 5 is aggressive (Scores of 1 and 2 are preferred).

For traits scored 1-9:

- 4 and 6 show slight variation from ideal but this includes most animals. Any animal scoring 4 and 6 would be acceptable in any breeding program.
- 3 and 7 shows greater variation but would be acceptable in most commercial breeding programs, but seed stock producers should be wary.
- 2 and 8 are low scoring animals and should be looked at closely before purchasing.
- 1 and 9 should not be catalogued and are considered culls.

BEEF CLASS STRUCTURAL ASSESSMENT GUIDE			
Trait	Key	Scoring Range	
Docility	D	① 2 3 4 ⑤	1. Docile 3. Restless 5. Aggressive
Front Feet Claw Set Rear Feet Claw Set	FC RC	 1 2 3 4 5 6 7 8 9	1. Open/Divergent 5. Good 9. Scissor Claw
Front Feet Angle Rear Feet Angle	FA RA	 1 2 3 4 5 6 7 8 9	1. Stubbed Toe 5. Good 9. Shallow Heel
Rear Legs Side View	RS	 1 2 3 4 5 6 7 8 9	1. Straight 5. Good 9. Sickie Hocked
Rear Legs Hind View	RH	 1 2 3 4 5 6 7 8 9	1. Bow Legged 5. Good 9. Cow Hocked
Front Legs Front View	FF	 1 2 3 4 5 6 7 8 9	1. Bow Legged 5. Good 9. Knocked Knee
